These 2^{RU} and 3^{RU} Cool Shelves feature integrated fans in the sides and have the option of installing additional fan kits in the bottom of the shelf for maximum cooling. Both shelves are designed to fit in standard 19" equipment racks and their heavy duty construction makes them perfect for commercial and residential applications. The 2^{RU} shelves feature two 50mm fans in each side panel and the 3RU shelves incorporate four 50mm fans in each side panel. These fans can be configured to exhaust hot air, intake cool air, or both for a cross flow of air to keep even the hottest receivers and amplifiers from overheating and preventing thermal shutdowns. These shelves can function as a standalone cooling solution or be used in conjunction with other cooling products manufactured by Cool Components. In addition to cooling, these shelves have built-in wiring management to keep cables neatly in place.

Today's electronics such as receivers, amplifiers and high definition DVRs generate an enormous amount of heat. The Cool Shelf by Cool Components solves the challenge of keeping that equipment cool when it is installed in a rack, especially when airflow is otherwise limited. Whether configured to blow cool air onto the components or exhaust the heated air, these shelves will help to solve the dilemma of heat build up which not only can cause issues with performance but can also drastically shorten the life of equipment!

FEATURES

- 2 & 3^{RU} Shelf for Use in Standard 19" Equipment Racks
- Sturdy Construction Supports Large Components
- Integrated Cooling in Sides and Bottom with Various Airflow Patterns Possible
- Wire Management Built Into the Back of the Shelf
- Fans are Compatible with Temperature Controllers for Automated Control of Cooling
- Optional Bottom Mount Fans for Even Greater Cooling
