

DynaBox Named 2006 'Product of the Year'

Revolutionary In-ceiling Speaker Enclosure Receives Electronic House Magazine's Top Prize

Framingham, MA, July , 17, 2006 – DynaBox, a revolutionary in-ceiling enclosure, has been named 2006 Product of the Year by Electronic House Magazine. DynaBox, from Dynamic Control, was selected for the top prize by an elite panel of judges comprised of EH Publishing's top editors. DynaBox was chosen from hundreds of entries and recognized for technological innovation and overall value.

"Our decisions are based on product demos, talking with installers and users, and for products we found to be promising," said EH Magazine Editor Cindy Davis. "Topping our list of criteria is technological innovation, combined with overall value—and just plain outstanding features."

DynaBox is the first and only in-ceiling enclosure that is retrofittable for installation into existing home theaters and structures. This innovative, one-of-a-kind design enables the DynaBox to be completely collapsed, inserted into an existing speaker opening and expanded back out. DynaBox can be installed quickly and easily, eliminating the need for custom constructed boxes that are cumbersome, time consuming, and costly.

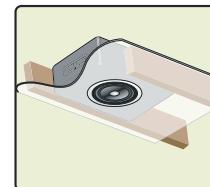

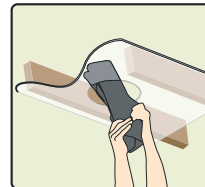

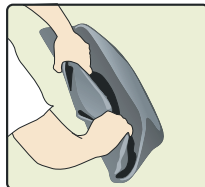

"DynaBox dramatically improves the sound quality of your speakers and stops noise transfer to other rooms," said Scott Whitaker, Dynamic Control CEO and DynaBox designer. "With DynaBox, you get clear sound inside your theater and peace and quiet outside."

About the EH Magazine Awards & EH Publishing

Electronic House Magazine focuses on reviewing the newest home technologies and products on the market and comparing them to standards in the industry. Each year they review hundreds of these products and award their favorites with the Electronic House Product of the Year Award. Electronic House Magazine is published by EH Publishing. Since 1994, EH Publishing has grown to become the most prominent media company in the field of home technology, offering top consumer and trade magazines, trade shows, original research, and associated Websites.

About Dynamic Control, makers of Dynamat

Dynamic Control of North America, Inc. delivers acoustic environmental solutions for a broad range of industries including car audio, automotive performance and restoration, home and architectural, appliances, electronics, aviation and custom original equipment manufacturers. Dynamat, a Dynamic Control brand, is recognized by consumers worldwide as the leading product for eliminating unwanted noise and vibration. Dynamic Control is a privately held corporation located in Hamilton, Ohio, USA. Dynamic Control products are available in more than 50 countries and 3,000 stores nationwide.

DynaBox is ultra-flexible which enables it to be completely collapsed for installation. This revolutionary design makes the DynaBox extremely easy to retrofit through existing openings or install in new construction.

Simple retrofit installation!
